Re: *United States ex rel. Anti-Discrimination Center v. Westchester County*
06 Civ. 2860 (DLC)

Dear Mr. Johnson:

This response is submitted in accordance with paragraph 2(d) of the Court's July 26, 2012 Order which provides that "[b]y August 16, 2012, the County will provide to the Monitor a statement setting forth the racial and ethnic composition of each zoning district in a given municipality in accordance with the methodology provided in paragraph 19" of your July 20, 2012 Declaration.

As an initial matter, you are advised that the methodology used in completing this process varies slightly from the methodology suggested in your July 20, 2012 Declaration. However, the process used complies with the spirit of the request and the following explanation is provided to address the differences. Municipal zoning polygons (GIS data layer) were "intersected" (overlaid) with Census Block polygons in order to determine population profiles by zoning district. Where census blocks are split by zoning districts, population has been apportioned based on percent area of block that falls within each zoning district. This technique assumes that the total population of each block is evenly distributed throughout the block and results in estimated populations that contain fractions of people.

An alternative approach that keeps Census Blocks intact requires two separate population analyses – one limited to Census Blocks that fall completely within one zoning district and a second analysis that encompasses Census Blocks that fall completely within one zoning district plus the full area of Census Blocks that fall only partly within that zoning district. While this approach would yield "low" and "high" population figures, these two sets of results would be no more accurate or descriptive of zoning district population characteristics than the results of the County's analysis.

It should be noted that the U.S. Census Bureau changed Census block geographies between the 2000 and 2010 Census, in most cases by adding blocks by splitting areas which were previously

contained within a single block. The finer level of geography allows the 2010 population analysis to be more precise.

Enclosed herein are the tables setting forth the racial and ethnic composition of each zoning district in each of the thirty-one (31) eligible municipalities for the 2000 and the 2010 Census. If you have any questions, please let me know.

Sincerely yours,

Edward Burroughs
Commissioner
